Continuation of 11. does NOT place the application in condition for allowance because: of reasons set forth in prior office action. Applicants' argument of unexpected result in pages 14-31 of instant specification is noted. But, applicants have not set forth the required analysis of the Specification/figures. It is not for examiner to ferret out factual data in the record and interpret it in a light most favorable to the applicants. Applicants' argument of "consisting essentially of" is noted. But, applicants fail to show by factual evidence that the additional essential elements from cited prior art are detrimental to properties of claimed alloy. Applicants' argument with respect to Ti, V, Zr, Nb, Mo, Ta, W, and Re is noted. But, they are optional elements. Applicants argue that Fujiwara is not concerned with reflectivity of the electrical contact. But, applicants have not shown that recited reflectivity would not be inherently possessed by material. Applicants argue that examples of Fujiwara fail to disclose claimed composition. But examples of cited prior arts are for illustration not limitation. Applicants' argument in paragraph bridging pages 8-9 of instant remarks is noted. But, each of claimed elements is taught and applicants failed to show claimed elements and their contents are critical. Comparative example 11 also meets instant claim 4, for example. Applicants' argument with respect to instant example 2 and comparative examples 12-13 is noted. But said examples have Ge below claimed range 0.5 wt.%. Applicants' arguments with respect to the examples of JP '568 and "consisting essentially of" arguments are noted. Examiner reiterates the same responses set forth above in Fujiwara response.
